Panel 1.

Plan

North Elevation

Speed_Space is built as a coiled sequence stretching out to collect the linear sequence of towns and landscapes located along the Perth to Kalgoorlie Water Supply Pipeline in Western Australia. The entire journey can be considered as an experiential sequence, an experience held in the mind as a 'constellation', a system of meanings held by the person who has progressed through the necessarily sequential process. What is however recalled, remembered or imagined is this journey as a united constellation of highlights bound together as a whole. As with all architectural works, once the whole is complete a weakening shakes our perception, a trembling occurs and at this moment there is a recoiling at the limit. What was complete unravels into the world and we once again find ourselves in the realm of the 'unbuilt'.... waiting to gather new parts and again make new worlds.
